

# Best of All Worlds

---

A guided tour of sustainable living practices at School for Life

## Who

School for Life at the Kul-Kul Campus is a progressive education institution and center for innovative sustainable practices. The School was founded by John and Cynthia Hardy, whose international jewelry brand is respected worldwide for its platform of “sustainable luxury.”

## What

School for Life’s pedagogy centers on holism, multiple intelligence theory, and best ecological practices combined with the rigors of mainstream education. We will prepare the future leaders of our global society. The School offers Pre-Kindergarten through Year 10, with student boarding facilities available for Years 7–10. Homes for international families with students enrolled at the School are available on the eight-hectare campus.

## Where

The School’s Kul-Kul Campus is in Sibang Kaja, Bali. The west side of the campus is devoted to the School and its classrooms, libraries, laboratories, and other facilities, while the east side of the campus holds the Learning Village and the entrepreneurial enterprises that connect students to solving real-life problems.

## When

Opening in September 2008, the School plans to enroll more than one hundred students.

## Expectations for Sustainability

Every guest to School for Life will plant a bamboo seedling to offset the carbon emissions created by their transport to and from the School, in line with the School’s aim to participate in creating a greener future.
